NETFLIX HOME PAGE

This project is an advanced Netflix Homepage UI Clone developed using HTML, CSS, and JavaScript in a single-file structure. The objective of this project is to replicate the look and feel of the Netflix landing page while implementing interactive and dynamic UI features.

The application includes a responsive navigation bar with scroll effects, a visually rich hero banner, dynamically generated movie rows based on categories, and smooth hover animations. JavaScript is used to manage movie data, render content dynamically, implement a real-time search feature, and display movie details using a modal popup.

This project demonstrates strong fundamentals in frontend development, including DOM manipulation, event handling, responsive design, and clean UI structuring. It serves as a practical example of building real-world user interfaces without using external frameworks.
